

About Orton-Gillingham

Orton-Gillingham (O-G) is a research-based, multi sensory approach to teaching reading, writing, spelling, penmanship, and other literacy skills to individuals with dyslexia. It is named for Dr. Samuel Orton, a Harvard-trained neuropsychiatrist and pathologist, and Anna Gillingham, a psychologist and master educator, who together developed this pioneering approach.

Is Orton-Gillingham Training Right for Me?

Orton-Gillingham is the basis of many reading programs, including Wilson and Foundations, PAF, and Lindamood-Bell LiPS. However, O-G itself is not a program; it's an instructional approach, based on the principles of diagnostic and prescriptive, multi sensory teaching. It can be personalized and tailored to any skill or age level, and it is extremely effective for students with any degree of reading, spelling, or writing difficulty, whether or not they have a dyslexia diagnosis. It is invaluable training for classroom teachers, reading specialists, and special educators, since by some estimates one in five people have dyslexia. An even greater number struggle with literacy simply due to a lack of effective reading instruction because many common instructional practices, including those often taught in teacher preparation programs, fail to incorporate or even contradict the science of reading.
